Corvallis, Oregon – August 2020

Videx, Inc., an industry leader in the design and manufacture of data collection and access control products, is proud to announce an innovative new developer portal designed to simplify the design and distribution of customized data collection apps.

With 40 years of experience in the data collection industry, Videx recently released CyberBadge, a durable, versatile 1D/2D barcode and RFID scanner. The new Videx Data Applications Center, or App Center, is the source for the latest CyberBadge communications software and documentation. For users that want grab-and-go data collection, CyberBadge apps written by Videx's in-house developers will be available to download on the App Center. If your customers prefer a scanning solution tailored to their unique needs, the App Center will provide Videx's resellers and developers access to tools that support the design and development of customized applications for virtually any industry. Through the App Center, Videx resellers can create user accounts for their customers, allowing developers to conveniently share new apps and documentation. Additionally, the Videx Data Applications Center will soon host an Application Builder that gives users the ability to quickly create custom CyberBadge applications without writing a single line of code!

For more information regarding the Videx Data Applications Center or Videx data collection products, please visit www.videx.com or call 541-758-0521.
